

TREES

Trees are one of the most important things on Earth. Trees give us food, clothing, and shelter. Medicine also comes from some trees and plants.

Trees absorb water through its roots, and send out water vapor through its leaves, thus making the air around us much cooler.

Forest trees regulate the flow of water and keep our rivers and streams supplied with ground water all year round. They also prevent excess water from flowing and flooding low-lying areas which destroy homes and farms.

1. Print the title of this selection.
2. What do trees do? Check the letter of your answer.
 - a. They prevent rain.
 - b. They prevent floods.
 - c. They stop the clouds from forming.
3. Write at least three things which trees give.
4. Write the two things which flood destroy.
5. Write the part of the tree which absorbs water.
Put the word in a box.
